IAG SUB-COMMISSION EUREF

The **IAG Sub-commission EUREF** is responsible for the maintenance of the European Terrestrial Reference System (**ETRS89**). Check the EUREF web site: <http://www.euref.eu/>

THE EUREF PERMANENT NETWORK - EPN

The **EUREF Permanent Network (EPN)** is a science-driven network of permanent **GNSS tracking stations** whose weekly computed positions are used by EUREF to realize the European Terrestrial Reference System (ETRS89). As an integral part of INSPIRE, this reference system forms the **backbone for all geographic and geodetic projects on the European territory** both on a national as on an international level. The EPN is also valuable for scientific applications such as geodynamics, sea level monitoring and weather prediction.

Almost 300 EPN stations, distributed all over Europe, provide in **near real-time and real-time high quality GNSS data** archived at local and regional data centres.

EPN analysis centres **routinely analyse the data** from this network and deliver to the GNSS community **precise coordinates for all stations** involved in the network.

The EPN tracking stations are integrated in the successive realizations of the **International Terrestrial Reference System**, which is the basis for the European Reference System.

Since the EPN is the European densification of the International GNSS network IGS (<http://igsceb.jpl.nasa.gov/>), a complete harmonization of **standards** between the global and European network is put forward.

EPN GNSS TRACKING DATA

For EPN station information, please see:
